

## Job Aid: Steps for Best Practice Garbing for Sterile-to-Sterile Nonhazardous Compounding for SCA with Sink Outside of the SCA that Is a Separate Room

- 1. Change into scrubs and facility-dedicated shoes
- 2. Use restroom; remove makeup, jewelry, and extra clothing; tie up hair
- 3. Clean personal glasses with EPA-registered one-step bactericidal disinfectant cleaner wipe for frames and lens cleaner for lenses
- 4. Perform hand hygiene, including a 30-second lather to the elbows, after using nail pick on wet, lathered hands; dry hands with low-lint wipes

- 5. Enter SCA
- 6. Don a face mask with folds down on outside, bend nose bar, pull down under chin; no gaps; beard cover over mask if goatee
- 7. Don head cover (bouffant cap) over ears *and* hood if full beard, hijab, or other headdress or if hair not contained by bouffant

- 9. Don gown (do not put thumb loops in place)
- 10. Don shoe covers one at a time, stepping over perimeter line

- Clean side anteroom
- 11. Obtain sterile gloves; remove from outer package at empty, clean counter surface
- 12. Apply alcohol-based hand rub to nails, hands, and wrists
- 13. When dry, put thumb loops in place and don sterile gloves
- 14. Sanitize gloves with sterile IPA (unless initial GFT scheduled)
